Project estimated at $7 million is for canal lining and replacement of smaller open-ditch laterals with underground pipe. This project is broken down in three areas which consist of the northern most part of the District, “Canal B” and its open ditch laterals, and “Canal C and D” and its open-ditch laterals. Lining of main canals will be performed with concrete, replacing the earthen canals. Replacement of open-ditch laterals will be constructed with pvc pipe in some areas and reinforced concrete pipe in other areas where required. Turner Collie & Braden’s study estimated water conservation at 9,300-acre feet per year. Map of proposed project areas are enclosed.
